SMS API Gateway

Wholesale SMS Messaging Gateway Service Specifically Designed for Application Providers

Simply and Quickly build SMS communication in Applications and Resell our SMS services as part of your product offering.

Application Developers and Providers

With Intelli Messaging, System Developers/Providers can readily build SMS communication into current system offerings, via our SMS gateway, without having the overhead of building SMS administration functionality like credit management, account inhibiting, low credit notifications, message logs, invoicing or cash collection.

You can value-add to your client solutions with intelligent, reliable, simple-to-use SMS messaging that tangibly improves clients' communication to staff and customers. Our MessageCore™ Intelligent Messaging gateway features advanced (but simple to integrate) functionality to enhance many aspects of B2B, B2C and C2B communications.

Reseller Web Admin Application Portal

Get Control of your own customer's messaging accounts using MessageCore™

MessageCore™ provides a unique, high-featured message and customer management interface application via the web. It allows Solution Providers to manage SMS message volume and account access for their customers, eliminating the need for separate development of this functionality into their business systems.

It saves development time and cost, and provides a versatile solution with high on-sell potential. Within the management interface Solutions providers can:

1. Create Customer identities and users.
2. Define customers' payment type – Pre or Post-paid.
3. Set up and add SMS credits for customers that are pre-paid account type.
4. Automatically create and send low credit notifications to customers with pre-paid accounts.
5. Control customers access to the end user portal.
6. Extract information from the system for billing and analysis.

End User Web Application Portal and Applications

Further Enhance and Refine your SMS service offering with Intelli End User Applications

Intelli Messaging's End user portal allows Solution Providers to give their customers direct access to messaging and account information. This reduces the need for the end customers to make support calls queries. The Application also includes an online payment application so the processes of cash collection, invoicing and SMS credit management are automated.

The portal also includes SMS send applications for those end customers that you give access to, including:

1. Bulk SMS sending with Contacts and Templates including contact categories
2. Appointment calendar with automated SMS alerts
3. SMS Competition management

To further increase customer's SMS messaging volume the following applications and sending methods are available for distribution:

1. Email to SMS
2. Outlook OMS service – to setup direct SMS sending from Outlook
3. Outlook Plug in for advanced messaging from Outlook
4. Windows Bulk Send Application

To Easy

As the systems provider, you extend your relationship to your customers and earn profit from every message sent rather than involving a secondary company in a relationship with your customer.

MessageCore™ makes developing SMS functionality within your business systems easy ... no need to write application code to track message volumes or control pre-paid accounts. Managing your customers' accounts couldn't be easier! That's why so many Solution Providers are choosing Intelli Messaging.

For detailed administration portal application functionality please contact us directly on **+61 3 9258 2135** or visit **www.intellisms.com.au** and create a demo account today.
